AutoCAD is supported and maintained by the AutoCAD Architecture Team. Their jobs are to design the tools that help AutoCAD users create, modify and share models, drawings and other project information. Since 2013, the AutoCAD Architecture Team is also responsible for the AutoCAD-related technical specifications known as AutoCAD Architecture Standards (AAS), which are also actively maintained by the team. The latest AutoCAD Architecture Standard is AutoCAD Architecture ST 2016, released in May 2016. What is AutoCAD Architecture Team? The AutoCAD Architecture Team is a special division of Autodesk's corporate organization that builds, maintains, and promotes the AutoCAD® Architecture standard. In addition to supporting and promoting the AutoCAD Architecture standard, the AutoCAD Architecture Team: Offers technical assistance to AutoCAD customers to help them master and use the Standard. Administers the AutoCAD Architecture Standard that defines and specifies the standards for CAD capabilities, including the DWG and DXF standards, and related interfaces. Covers the majority of AutoCAD-related code changes that happen within Autodesk, including bug fixes and enhancement upgrades. Provides support to Autodesk products. The AutoCAD Architecture Team is located at Autodesk Corporate headquarters in San Rafael, California. The team consists of approximately 60 employees. The team's area of responsibility includes development of the AutoCAD Architecture standard. How can I get help with AutoCAD Architecture Team? You can contact the AutoCAD Architecture Team by following the online user guide to report a bug or feature request, as well as share comments, ideas, and suggestions. 3D features 3D features are provided through third party APIs. The most common 3D programs are AutoCAD Architecture, Autodesk 3ds Max, Autodesk 3ds Max Design, ArchiCAD, Archicad, Rhinoceros, V-Ray, Cinema 4D, Blender, Modo, Sketchup and Prepress. AutoCAD R14 introduced more support for designing in 3D, including layers and layers from 3D. File formats AutoCAD supports a wide variety of file formats, such as DWG, DXF, HLP, IGES, PLY, STEP, and SVG. Search and Reference The Reference Manager database also contains a search and reference tool. The search engine can search text, not only in the CAD objects and properties but also in the comments and other tags. It can be used as a search tool for the objects and its properties, and also for the comments and other tags associated with them. With the search feature the user can quickly find objects by name and ID. AutoCAD 2008 introduced the 'AutoCAD Search Builder,' which allows users to create AutoCAD database search queries and save them as an AutoCAD query file, which can then be applied to any database table and/or database object. It was first introduced in AutoCAD 2008 R12. AutoCAD uses a 'date-based search engine' to search for objects by its creation date. This was first introduced in AutoCAD 2007. Availability AutoCAD has been sold by Autodesk since 1994, when it was initially designed and marketed as "Professional Drawing." Since that time, it has been available for Windows, Macintosh and Linux computers. In 2002, Autodesk CEO John A. Rogers was quoted in Business Week as saying, "What separates the powerful from the rest is our pricing." In 2018, Autodesk introduced AutoCAD Lite, which does not contain most of the advanced tools of its higher-priced counterparts. It is intended for beginners, students, entry-level users, and small business users. It is available as freeware. Usage In 2015, Autodesk estimated that more than 175,000 copies of AutoCAD were sold. The total number of users was estimated to be 3 million. The software is commonly used for architectural, engineering, and construction projects. In its data and services unit, a1d647c40b
